Key Features in our project:
- Feed
    - Feed where the tasks are displayed from the database
    - As a user I would like to modify/filter my task area/feed
- Login/Register page
    - Has to connect to the back end to check if they have an account and set new accounts
- Add tasks
    - A page where the taskers can post the name of their tasks descriptions, name and price
- Complete task
    - Marks task complete
    - Completed tasks should not show up in the Feed, but should be viewable on a user's history page
- Rating & feedback
    - Place where customers can give other users a rating and review after they have completed a task from/for them. Will be stored in tasks table in mysql database
- Profile Page
    - Display photo, name, bio, and rating (for each user this will be stored as a java script object and will be stored in the database)
    - List tasks this user has completed in the past (user rating can be calculated based off these)
    - Lists tasks a user has posted in the past
- Landing page
    - This will have a description of the app and its functions as well as the links to register or login
    - Maybe display sample tasks/allow the user to browse the site to decide if they want to sign up
- Message board
    - This is where the taskers and the workers will communicate logistics
- Notifications
    - As a user I would like to be notified when my task is accepted or completed, or when I get a message.

Individual Contributions:

Manoj: I helped with the user stories and helping set up our project plan on Jira, working on login page

Greg: Helped set up docker, and mysql, update readme.
https://github.com/CSCI-3308-CU-Boulder/3308SP21_011_6/commit/e234581e7dd8f354a22ad63e72483357e3820393

Jules: Made Taskit logo and thumbnail logo.

Tim: I made the Figma wire frame
https://github.com/CSCI-3308-CU-Boulder/3308SP21_011_6/commit/9666d5ad5eee542a8e6fdc8edea62271af12af0f#diff-3767e64f519a9ec31b19705a3baf32885a5699a8e04f5602d99bbab41352140f

Ryan: Also helped organize user stories, updated READ.me, general wireframe concept drawing for home/landing page, working on landing page

- ● https://github.com/CSCI-3308-CU-Boulder/3308SP21_011_6/commit/39072c788df0dd5fd4863abb0c736cb8588c1972
- ● https://github.com/CSCI-3308-CU-Boulder/3308SP21_011_6/commit/4314969b259d67563d951863bd89b18db39d2939

Josh
- ● Created wireframes w/ mockflow ([Page_1](#) | [Page_2](#))
- ● Helped Greg w/ system requirements ([ReadMe](#))
- ● Worked on project plans
    - ○ Replaced our prior decision to use roadmap instead of gantt chart
    - ○ Reorganized our backlog by adding epics
        - ■ Added more user stories to help facilitate our sprints
